PROFILE

CEH-certified cybersecurity practitioner and MCA (Cyber Security) graduate with hands-on experience in SOC operations, SIEM monitoring and incident response, and vulnerability assessment. Builder of working security tooling — including MyRecon, a live OSINT intelligence platform — pairing Python automation with investigative tradecraft. Grounded in MITRE ATT&CK, NIST and ISO 27001.

TECHNICAL SKILLS

SOC, SIEM & Monitoring — FortiSIEM, Splunk, log analysis, security event monitoring, alert triage, incident investigation & escalation

Incident Response & Detection — MITRE ATT&CK mapping, FortiSOAR playbook automation, incident documentation & management

VAPT & Offensive Security — Nmap, Nessus, OpenVAS/Greenbone, Burp Suite, Metasploit, OWASP ZAP, GoPhish, Wireshark, OWASP Top 10

OSINT & Threat Intelligence — Username/email footprinting, breach-exposure analysis, RDAP/WHOIS, DNS-over-HTTPS enumeration, IP/ASN attribution

Endpoint & Network Security — Firewall rule & open-port review, endpoint security configuration, AV/EDR status assessment, hardening, segmentation

Programming & Automation — Python, Flask, PySide6, REST APIs, Server-Sent Events, WinRM, JavaScript, SQL (MySQL/PostgreSQL), Bash, Git

AI / ML & Platforms — scikit-learn, Random Forest & Logistic Regression, feature engineering; Windows, Linux (Ubuntu, Kali), AWS, Azure

Frameworks & Standards — MITRE ATT&CK, NIST, ISO 27001, OWASP Top 10, IT General Controls (ITGC)

PROFESSIONAL EXPERIENCE

Analyst · Deloitte *11/2026 - Present*

Network Engineer · Ogma Consulting, Gurugram *08/2026 - 10/2026*

- Configured and maintained enterprise network infrastructure, including routing, switching and firewall policies; supported network security controls, access control, segmentation and monitoring across client environments.

Cyber Security Engineer – Intern · Niveshan Technologies India Pvt. Ltd., Delhi *01/2026 – 07/2026*

- Monitored and triaged alerts in **FortiSIEM** — working the alert queue, validating detections against raw log evidence, separating true positives from noise, and escalating confirmed incidents with a written investigation trail; onboarded devices and log sources into the platform and monitored collector health to keep detection coverage intact.
- Used **Splunk** for log analysis and investigation — pivoting across correlated sources (endpoint, firewall, authentication) to reconstruct incident timelines, and mapping observed adversary behaviour to MITRE ATT&CK techniques to support classification and escalation decisions.
- Performed authenticated configuration reviews over **WinRM** against Windows and Linux hosts — executing remote checks on local accounts, privilege assignments, running services, patch currency and host security configuration — then reported risk-rated gaps (missing patches, end-of-life software, unauthorised applications) and tracked remediation through to firewall port closure.
- Built and tuned FortiSOAR playbooks to automate repeatable response steps, and ran vulnerability and exposure assessments across AWS-hosted and on-premises hosts using Nessus, OpenVAS and Nmap.
- Conducted phishing analysis and internal security-awareness testing with GoPhish, measuring click and credential-submission rates and reporting metrics to leadership.

Web Developer – Intern · Headway, Delhi *07/2022 – 08/2022*

- Built responsive front-end components for brand websites using HTML, CSS and JavaScript.

PROJECTS

MyRecon — OSINT Intelligence Platform — *Python, Flask, JavaScript, REST APIs, Vercel/Render* **myrecon.xyz**

- Live OSINT platform turning a single identifier — username, email, domain or IP — into a structured public footprint, scoring each finding for confidence to filter false positives. Username enumeration across 100+ platforms with per-platform validation and profile enrichment.
- Email intelligence (provider/deliverability analysis, disposable detection, breach exposure via LeakCheck API); domain and infrastructure recon using RDAP, full DNS enumeration over DNS-over-HTTPS, and IP geolocation with ISP/ASN ownership, hosting/proxy flags and reverse DNS.
- Privacy-preserving password-exposure checking against 900M+ breached credentials via a k-anonymity model — hashed client-side, only the first five hash characters transmitted, no server-side storage. Ships as web app and desktop GUI with JSON/CSV export.

Endpoint Control & Security Assessment Tool — *Python, Flask, PySide6, WinRM, Nmap*

- Agentless multi-device platform assessing firewall state, open ports, patch level, antivirus status and running applications, automating evidence collection into a risk-analytics dashboard with live updates over Server-Sent Events.

Phishing Detection System — *Python, scikit-learn — academic project*

- Malicious-URL classifier extracting 30+ lexical and host-based features; trained Random Forest and Logistic Regression models on a self-built dataset.

EDUCATION

MCA – Cyber Security · NMIMS University, Mumbai *07/2024 – 06/2026 · GPA 7.87/10*

BCA – Web Development · The NorthCap University, Gurugram *06/2021 – 04/2024 · GPA 7.31/10*

CERTIFICATIONS

- Certified Ethical Hacker (CEH) – EC-Council · Fortinet NSE 1, NSE 2 & NSE 3 · CISA (in preparation)
- OT/ICS-SCADA Cybersecurity (Udemy) · Cybersecurity 101 (TryHackMe) · Supervised Machine Learning (Coursera)
